

Private-repo Actions bills are a lump sum. This page is the per-job math Actionscope writes into a Job Summary — wall, rounded minutes, SKU, list-price \$, included-minute burn.

12 seconds still bills 1 minute

GitHub rounds **each started job up to the next whole minute**. A 12-second lint is 1 rounded minute. This is not `ceil(combined wall)`. Jobs that never started are 0.

Included-minute burn

Standard hosted runners only: **Linux 1× · Windows 2× · macOS 10×** per rounded minute. Larger runners cannot use included minutes (burn = 0).

Est. \$ (list) — same rates as the Action / site

SKU	OS	PER ROUNDED MIN	INCLUDED
actions_linux	Linux	\$0.0060	1×
actions_windows	Windows	\$0.0100	2×
actions_macos	macOS	\$0.0620	10×

Est. \$ = rounded minutes × list rate. Label it an estimate. Source: GitHub Actions runner pricing, 2026-09-05. Public repos, self-hosted, and larger-runner SKUs are out of scope here.

How to read Job Summary columns

1. **Wall time** — `completed_at - started_at` (running jobs use now).
2. **Rounded min** — `ceil` each started job to a whole minute.
3. **Runner SKU** — from job labels / runner name; match the usage-report SKU.
4. **Est. \$ (list)** — rounded min × documented per-minute rate. Not an invoice.
5. **Included min** — plan-minute burn: Linux 1, Windows 2, macOS 10.

Worked example — same numbers as the site Job Summary demo

JOB	WALL	ROUNDED MIN	RUNNER SKU	EST. \$ (LIST)	INCLUDED MIN
lint	12s	1	actions_linux	\$0.0060	1
test	1m 4s	2	actions_windows	\$0.0200	4
build	48s	1	actions_macos	\$0.0620	10
Total	2m 4s	4		\$0.0880	14

48s macOS is \$0.0620 and 10 included minutes. Combined wall is 2m 4s; billed rounded minutes are 4 because each job ceils on its own.

Pin the free Action

```
- name: Actionscope
uses: Sofa-Loaf/actionscope@v0.1.3
```

The nested path `actionscope/action@v0.1.3` still works if you already pinned it. Default `GITHUB_TOKEN` is enough; lock-down workflows need `actions: read`.

Need names on your org? \$49 books a Minute Teardown — one org, one week, one written artifact. Not a software seat. \$19 App seats hello@28to3.me later, not live. [Sample](#) · 28to3.me
